

Workshop: Digital mapping for historians with QGIS

A map can be an excellent way to visualize your research, but only a small percentage of people know how to make them. Have you been wanting to learn more about digital mapping for your research, but do not know where to start? Or struggle to make time to teach yourself? This workshop may be for you!

In this workshop, which is a collaboration between the N.W. Posthumus Institute, the [HiDo Scientific Network for Historical Demography](#), and the [Quetelet Center](#), attendees will be taught the essentials of digital mapping using the world's most popular open source application QGIS. By the end of this two half-day hands-on workshop, you will be able to combine different types of data to create your own historical maps for use in papers, presentations and other sessions.

Attendance is free of charge. We can host a maximum of 15 participants for this hands-on workshop, so signing up is necessary. A wait list will be used in case interest exceeds the number of spaces available. Applicants should provide a brief motivation (a few sentences in English or Dutch) on how the workshop might be useful or interesting for your research.

Date: Tuesday 4 October (13.00-17.00) and Wednesday 5 October 2022 (09:00-13.00)

Where: Utrecht University (exact location tba)

For who: PhD candidates and fellows affiliated with the Posthumus Institute (max 15)

Language: English or Dutch, depending on participants

Signing up: Please contact Sanne Muurling (sanne.muurling@ru.nl) to express interest in attending the workshop **before 15 July 2022**, providing information on 1) your institutional affiliation, 2) your position (which year of the PhD or (for ECR) role within university), and 3) brief motivation of the reasons why you are interested in attending.
